

KJMR-II Blood Roller Mixer

KJMR-IV Blood Mixer

Next : KJMC-I Decapper for Vacuum Blood Collection Tubes

The instrument is used for complete mixing of blood, powder reagents, etc. in the anticoagulation tubes or vials. It is proved to be more accurate and convenient than the manual mixing by Shanghai Center for Clinical Laboratory as well as the big hospitals all over China. According to different specimen, KANGJIAN can provide various series, such as rolling and swing, CW/CCW rotation and speed adjustable machine. Also, the hollow shaft can be lengthened with limits to increase the mixing capacity. It is an ideal instrument for clinical lab.

Main Technical Data:

Speed: Swing: 0-80 times/min

Rolling: 0-80 r/m

Swing amplitude: 22 ± 1 mm

Power rating: 12W

Voltage: $220V \pm 10\%$ (50Hz)

N.W.: 3.6kg
